

**WHAT IS CLAIMED IS:**

1. A skateboard shoe comprising a front seat, a rear seat and a buckle structure for connecting the front seat and the rear seat; wherein

the buckle structure is formed a round lower cover tightly fixed to a lower center of the front seat, a buckle locked to an upper side of the lower cover by a stud, a teeth bank integrally formed to a bottom of the rear seat and exactly engaged to a lateral side of the buckle;

an upper side of the lower cover has a confining seat; the confining seat has guide grooves at two sides thereof; a locking shaft seat is formed between the two guide grooves; and

the buckle has a stepped elliptical hole at a predetermined position thereof; the elliptical hole is exactly matched to the locking shaft seat of the lower cover; thereby, the buckle moves straightly along the guide grooves of the lower cover;. one inner end of the buckle has an engaging teeth which protrudes downwards and extends inwards so that the engaging teeth is exactly engaged to the teeth bank at a lower end of the front seat; one end of the buckle passing through the lower cover has a receiving hole; a spring is positioned in the receiving hole; an outer end of the spring resists against another side of the front seat;

wherein the user presses the buckle from a lateral side of the skateboard shoe; the buckle will compress the spring so that the engaging teeth of the buckle separates from the teeth bank; and thus the size of the skateboard shoe is capable of being adjusted.

2. The skateboard shoe as claimed in claim 1, wherein a periphery of the lower cover is installed with a hook; thereby, the lower cover is tightly coupled to a lower end of the front seat by hooking.

3. The skateboard shoe as claimed in claim 1, wherein an inner side of an shoe surface of the skateboard shoe is distributed with a plurality of elastic pads so that the user's rear heel adheres to the pads comfortably, and it provides a function so that the user can adjust the skateboard shoe

for matching the size of the user's heel.

4. The skateboard shoe as claimed in claim 1, wherein a distal of the buckle is installed with a receiving hole for receiving the spring.
